

Special Topics Course: Fall 2006

Cells and Proteins

A research level course on bioengineering problems

A research level course whose aim is the study of dynamical events in cells. The understanding of cellular events is a major aspect in modern biological research. A large number of different dynamical events occur in cells that govern the functioning of the cells. A significant portion of the course will also be discussing modeling aspects.

The course is primarily aimed at students with a technical background who are interested in developing an understanding of cellular biology from a more analytical systems biology perspective. No background in biology is required.

The course is suitable for both beginning and advanced students.

- Contact Prof. Ober (ober@utdallas.edu) for further information.
- Consent of instructor is required for registration.

- Time: Monday 9am-12pm
- Room: ECSN 2.718
- Course: EE 7V85 501
