Serial No.		Date of Calibration
Location Surveyed	Reading (in Units)	<input type="checkbox"/> DPM <input type="checkbox"/> mR/hr

Comments

All work areas are to be surveyed weekly. Areas to be surveyed include bench, tabletops, sinks, drains, traps floors, etc.

Survey instrument should be appropriate for the isotopes used. A GM counter for strong emitters is usually adequate, but a scintillation counter should be used for weak emitters. Please report GM counter readings in mR/hr and scintillation measurements in dpm.

Copies of the survey should be sent quarterly to the Environmental Health and Safety Office @ mail station WT 14 or via email to kjw021000@utdallas.edu
