### Definition and Background

The *Functional Category Code* (a.k.a. "Function Code") is a program-oriented code that profiles the actual function of a room and helps determine its type of space. Classification often is determined by the program's funding: state, auxiliary, federal, or private; and it is often determined by whom the program serves.

Note: Function codes may be prorated to reflect more than one function.

### Finding the Correct Function Code for Your Department / Program

Function codes are grouped by the respective area served. To find the correct Function code for a given space in your department or program, ask yourself: who uses the space and for what purpose?

Refer to the definitions on the next page for guidance in selecting the correct Function Code(s).

### Rooms with Multiple Functions

Up to three Function Codes may be assigned to a single room: primary, secondary, and remaining. When a room serves several purposes or uses, it may be reported based on *time spent* on each activity. Overall, the total percent of use/proration for primary, secondary, and remaining use must always total 100 percent (usually expressed in estimates, such as 60-40, 55-45, 30-70).

Note: Only a room's function (via Function Code) and program area (via CIP Code) may be prorated, unlike its space use (via Space Use Code).

**Function Code Groups/Definitions**

Use the following definitions to determine the Function Code for a given room/space.

**General Education**

Activities that are part of an institution's instructional program.

**Continuing Education**

Activities associated with instructional programs that are funded by state appropriations and open to the public.

**Research Programs**
